# What is blockchain?

In short, a decentralized distributed encrypted network

This "network" mainly has the following two characteristics: 1. Decentralization; 2. Distributed

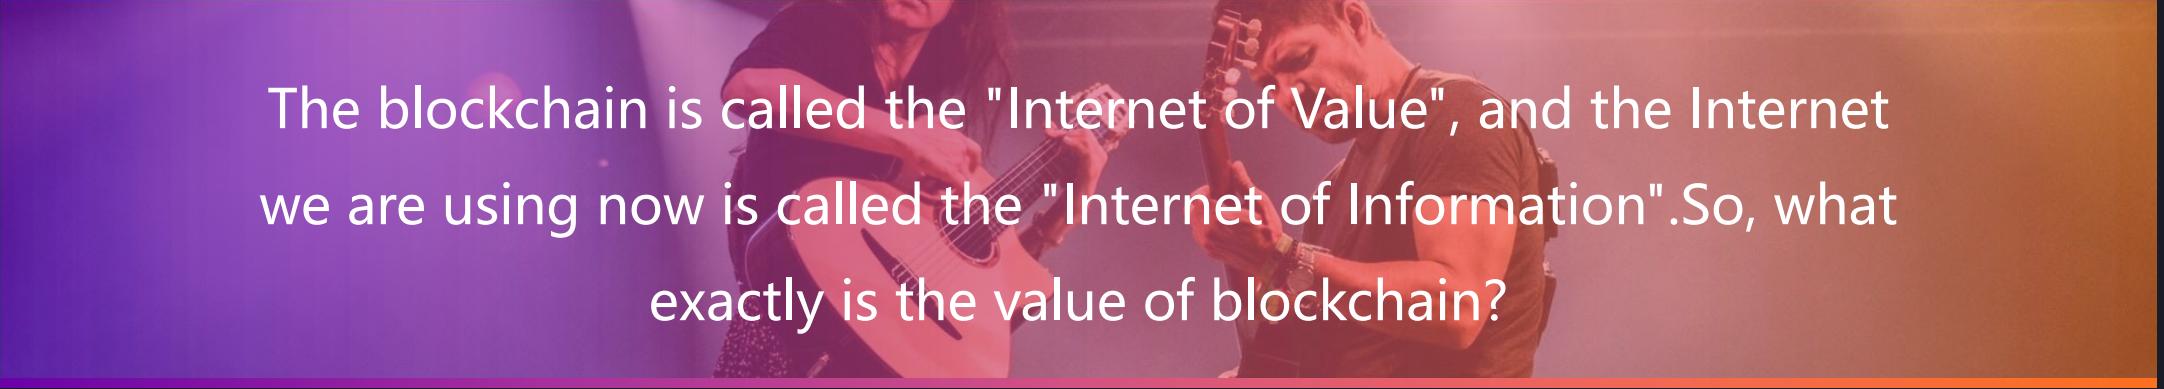

1. Decentralization: There is no information center on the blockchain, and each block participates in information storage and has a complete copy of the information.

2. Distributed: In the traditional information dissemination mode, information is concentrated in one or more centers, and the center is distributed to the outside world, while on the blockchain, there is no center, only distributed blocks.

# What is the value of blockchain

The blockchain is called the "Internet of Value", and the Internet we are using now is called the "Internet of Information". So, what exactly is the value of blockchain?

## Transparent

Every block in the blockchain participates in information storage. In the entire chain, information is transparent and open, and no one can exclusively share some information, which completely solves the complete information that the "information Internet" has not been able to solve so far. symmetrical problem

## Efficient

In the blockchain, not only the information is symmetrical, but also the accuracy of the information is guaranteed. Under the protection of the "consensus mechanism" and encryption algorithm, inaccurate information cannot be added to the chain, and it is also very difficult to tamper with it. In theory, the information in the blockchain is complete and secure, and does not need to be monitored or counted by a third party. Information dissemination is more efficient

# The collision between the music circle and NFT

NFT is a new art carrier, with the help of NFT, music directly deals with users

Musk tweeted on the social media Twitter that he would sell a song in the form of NFT, and attached the audio and video of the related electronic song. The tweet received more than 60,000 likes an hour after it was posted

Not long ago, Musk' s girlfriend Grimes successfully shot ten songs in the form of NFT within 20 minutes, and the transaction price was \$5.8 million

Tweet

Elon Musk @elonmusk · 1h  
I'm selling this song about NFTs as an NFT

# What is NFT?

NFT is an innovative application of blockchain technology. Its innovation is to provide a way to mark the ownership of native digital assets, and the ownership can exist outside the centralized service or centralized library

Simply put, the issuance of NFT works is the issuance of digital assets on the blockchain. This asset can be game props, digital artwork, tickets, etc., and is unique and non-reproducible. Since NFTs have natural collectible properties and are easy to trade, crypto artists can use NFTs to create unique digital artworks

Due to its non-homogeneous and inseparable characteristics, it can anchor the concept of commodities in the real world

# NFT trends

Among the various landing scenarios of the blockchain, music may be the most anticipated one

In the music industry, the emergence of the non-fungible token NFT (Non-Fungible Token) can enable the permanent preservation of artworks

In the future, more musicians and works will participate in the NFT field, and music and NFT will have a broader and deeper combination

The combination of NFT and the music industry is the general trend. This release of CoolDoge will become a starting point and demonstration of NFTization in the music industry, cultivate the consumption habit of paying for digital music, build a better music ecological environment, expand the global digital music work layout, and become the core competitive advantage in the consumption scene

# Description of CoolDoge

contract address: 0x16d3f80736D2241B8b7816a3422060B1b47a32f3

[www.cooldogenft.com](http://www.cooldogenft.com)

# CoolDoge Highlights

## Low threshold

Users can create music NFT works by themselves, and the operation is simple

## Low gas cost

During the entire transaction process, the additional costs incurred by both parties are only Gas consumption and minimal formalities 费

## Easy to use

At the same time, you can view the NFT issued by yourself, which is similar to the second-hand trading platform Xianyu in the use experience of NFT display and transaction.

## Transaction security

The CoolDogeNFT platform is an on-chain behavior where users purchase NFTs with cryptocurrencies, and the settlement of transactions is guaranteed by blockchain smart contracts

# CoolDoge Advantage

01

 Solve copyright management issues

02

 Protect the rights of musicians

03

 Copyright data transparency

04

 Improve royalty payment efficiency

05

 Open and efficient

06

 Low barriers to entry

# CoolDoge Metaverse

Create a personal avatar

Virtual Live

virtual concert

Sharing the stage with virtual stars

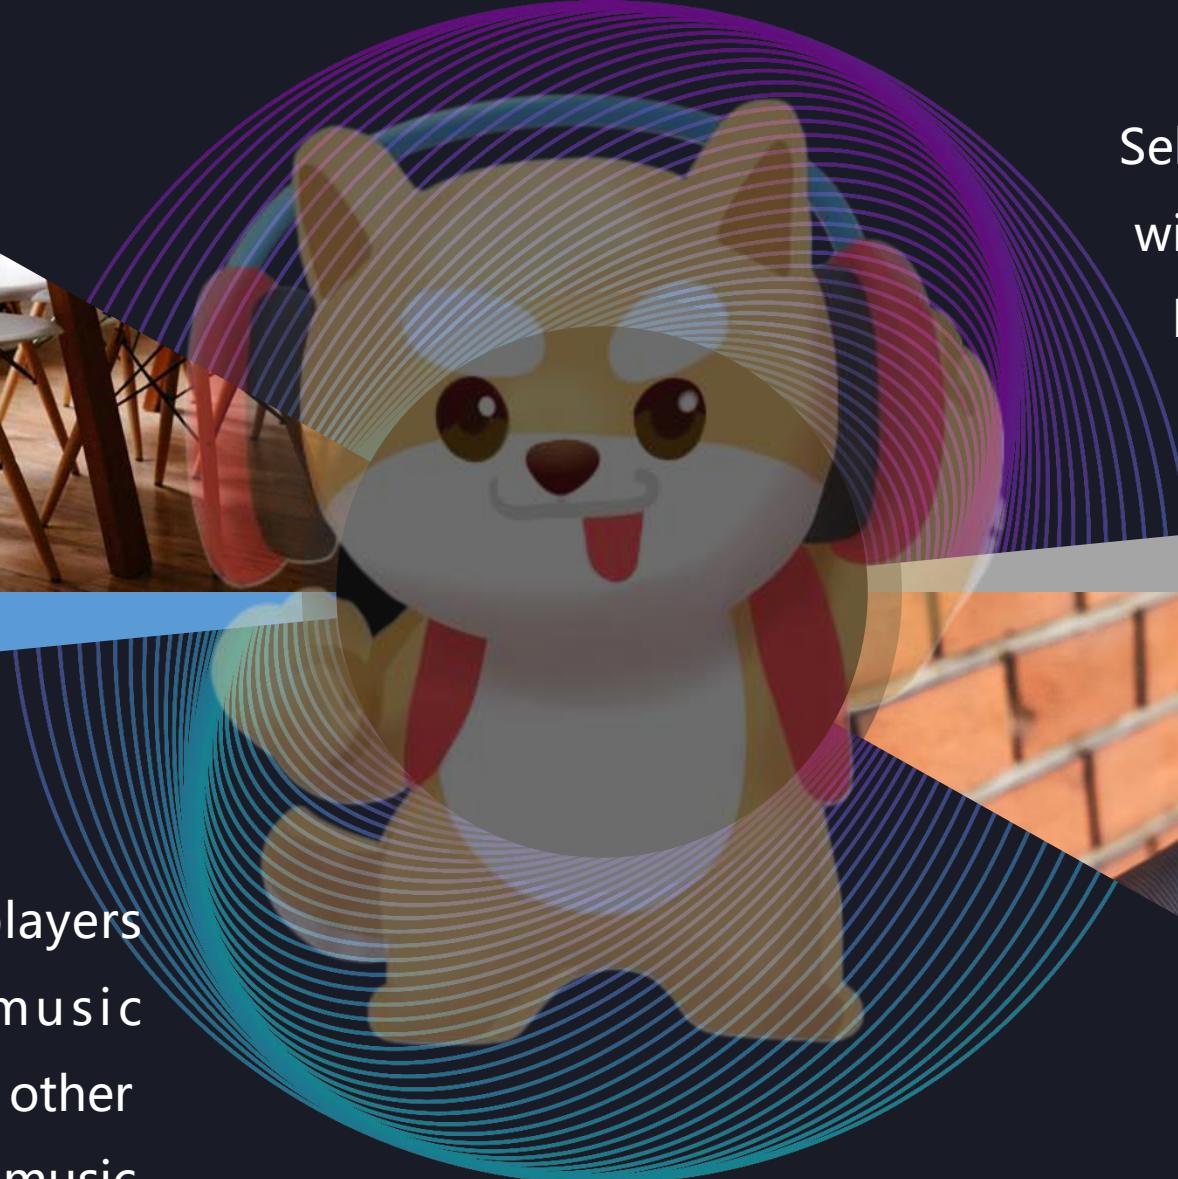

## CoolDoge main features

Upload your own music (players can record their own music media or sounds or upload other beautiful sounds) to create music NFTs

Sell music (mainly cooperate with global music stars) and help them make their own music NFT

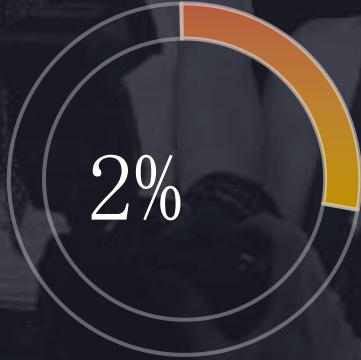

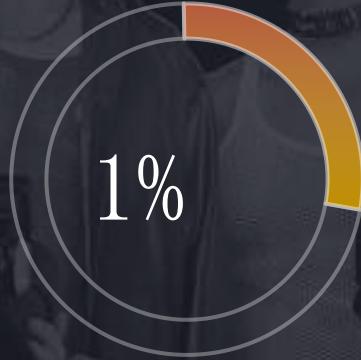

## Token Economics

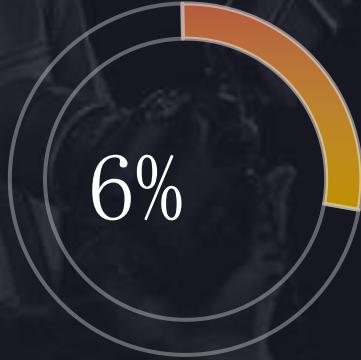

# Handling fee 9%

dividend busd

pool

marketing

## Pre-sale details and token distribution

Sales method: UNICRYPT pre-sale

soft top: 100B  
hard top: 200B

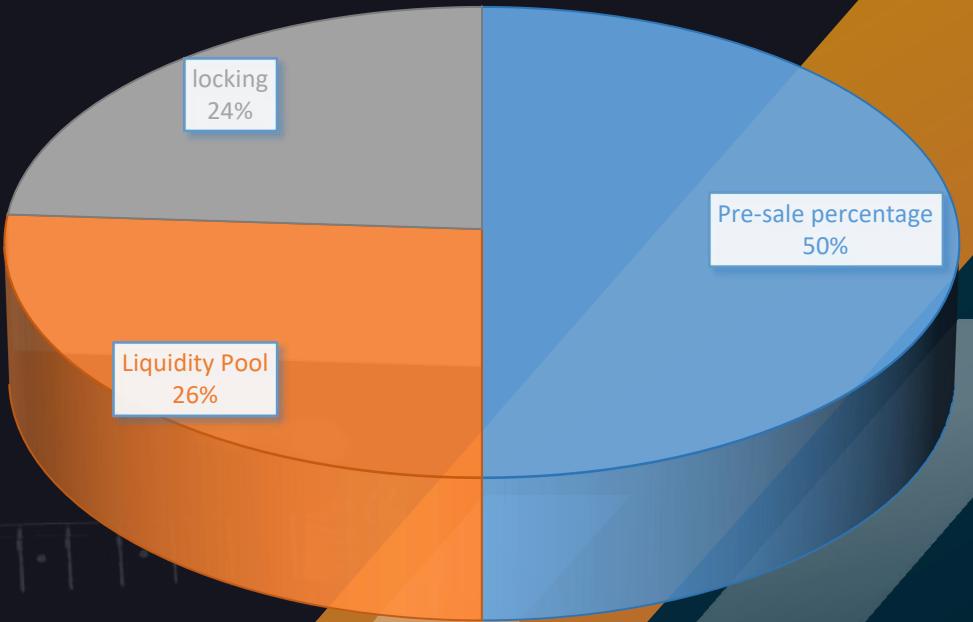

Presale Price: 1 WBNB = 250000000 CoolDoge  
Listing Price: 1 WBNB = 225000000 CDoge

maximum purchase: 1BNB

Total: 100000000000 枚

# Our Team

## KAIHUANG

Web application experts with experience in professional PHP web development experienced more than 6 years. It is a developer and researcher that has faced the challenge of his comfortable area. He is passionate about extracting knowledge from data. He has talent in team handling, project management and digital marketing.

## Kenny Chueng

With years of experience, Chueng is a enthusiastic software engineer with enthusiasm for programming language and front-end technology. She likes to explore different technologies and share his learning to the community. She has worked in Viki, Inc., Trakinvest and INSEAD.

## NAVEEN GUPTA

Naveen Gupta has more than 18 years of IT industry experience and has served as a variety of jobs for our customers. A professionally with innovative, vitality and highly vitality, with identification and utilization of business opportunities. A self-driven individual, very comfortable when dealing with key accounts, and exceeds the service expectation. Actively actively and have verified improvement capabilities by promoting the best practices.

## Armine Hovhannisyan

Armine is an expert in the web and block chain industry with more than 8 years of work experience. Even as a young contractor, he is also carrying out various projects, including mobile apps for Android and iOS and web development including backends and front ends.

# CoolDoge Road Map

# CoolDoge future vision

01

02

03

The music blockchain has already been tried in various application scenarios, which also proves its potential value to solve the pain points of the music industry to a certain extent.

CoolDoge has developed a sustainable implementation and operation model, as well as efficient industry cooperation and the establishment of a new ecosystem

The platform regularly releases limited-edition music NFTs to ensure the liquidity and rarity of NFTs and create mainstream applications in the industry
